

Numeration Vocabulary Study Guide

1. **Standard form** - a number written in a way that shows only its digits
Example: 1,350
2. **Expanded form** - A number written as the sum of the values of its digits
Example: $1,000 + 300 + 50$
3. **Word form** - a number written in words
Example: one thousand, three hundred fifty
4. **digits** - all numbers are made from these: 0,1,2,3,4,5,6,7,8,9
5. **period** - a group of three digits in a number, starting from the right. Each period is separated by a comma.
6. **compare** - find out which number is greater and which is less
7. **order** - write numbers from least to greatest or greatest to least
8. **value** - how much the digit is worth, according to the place it is in (1,382 The value of the 1 is 1,000.)
9. **place** - the position of a digit in a number (ie. Ones, tens, hundreds, thousands)
