

Unit Title: “Yearbook Sales: Exponents and Quadratic Equations”

Course: Algebra I (High School)

Subject Area: Mathematics

Time Frame: 13 days

Standards

<p>The student will:</p> <p>6.1 Simplify expressions involving exponents.</p> <p>6.2 Add and subtract polynomials.</p> <p>6.3 Multiply polynomials.</p> <p>6.4 Factor integers and find the greatest common factor for sets of integers.</p> <p>6.5 Find the monomial factors of given polynomials.</p> <p>6.6 Simplify quotients of monomials.</p> <p>6.7 Divide polynomials by monomials.</p> <p>6.8 Factor differences of squares, trinomial squares, and trinomials that are not perfect squares.</p> <p>6.9 Factor by grouping.</p> <p>6.10 Solve equations by factoring.</p> <p>9.1 Simplify algebraic fractions.</p>	<p>MA.A.2.4.1 The student will understand <i>and use the basic concepts of limits and infinity</i>.</p> <p>MA.A.2.4.2 Understand and use the real number system.</p> <p>MA.A.3.4.3 The student will add, subtract, multiply, and divide real numbers, including square roots and exponents, using appropriate methods of computing, such as mental mathematics, paper and pencil, and calculator. <i>Expectations</i></p> <p>MA.D.2.4.2 The student will use systems of equations and inequalities to solve real-world problems graphically, algebraically, <i>and with matrices</i>.</p>	<p>The student:</p> <p>M1b Uses and understands the inverse relationships between addition and subtraction, multiplication and division, and exponentiation and root-extraction; uses the inverse operation to determine unknown quantities in equations.</p> <p>M3a Discovers, describes, and generalizes patterns, including linear, exponential, and simple quadratic relationships, i.e., those of the form $f(n) = n^2$ or $f(n) = cn^2$, for constant c, including $A = \pi r^2$, and represents them with variables and expressions.</p> <p>M3b Represents relationships with tables, graphs in the coordinate plane, and verbal or symbolic rules.</p> <p>M3c Analyzes tables, graphs, and rules to determine functional relationships.</p> <p>M3d Finds solutions for unknown quantities in linear equations and in simple equations and inequalities.</p> <p>M5b Makes the basic choices involved in</p>

Algebra I Standards	Sunshine State Standards Benchmarks	NCEE New Standards
		planning and carrying out a solution. M6a Computes accurately with arithmetic operations on rational numbers. M6b Knows and uses the correct order of operations for arithmetic computations. M6f Uses equations, formulas, and simple algebraic notation appropriately.

Desired Results

Enduring Understanding	Essential Questions	Knowledge and Skills
<p>Students will understand:</p> <ul style="list-style-type: none"> Although the rules for manipulating exponential expression have diminished in importance as calculator and computer technology takes over algebraic bookkeeping, there is still the need to be familiar with the characteristics of tables, graphs, and equations that model exponential patterns of change. Quadratic equations arise from situations that have an underlying multiplicative structure. The power of this form is that it ties together all polynomials as products of linear factors. 	<ul style="list-style-type: none"> What are the formal rules for manipulating exponential expressions? How can I recognize situations in which quantities grow or decay by repeated multiplication? How is an increase in the independent variable related to a change in the dependent variable in a quadratic relationship? Where is the dependent variable changing the most? The least? Where the graphs of a quadratic cross the x-axis? The y-axis? What is the significance of these values in the situation? 	<p>Students will know</p> <ul style="list-style-type: none"> Key terms (i.e., base, exponent, exponential form, standard form, constant term, expanded form, factored form, like terms, parabola, quadratic term). <p>Students will be able to</p> <ul style="list-style-type: none"> Simplify expressions involving exponents. Simplify quotients of monomials. Divide polynomials by monomials. Factor differences of squares, trinomial squares, and trinomials that are not perfect squares. Factor by grouping. Simplify algebraic fractions.

Acceptable Evidence

Performance Tasks	Quizzes, Test, and Work Samples	Observations and Dialogues
<ul style="list-style-type: none"> Factoring Quadratics Students continue the use of the “diamond problems” and “area” to extend factoring quadratics. Properties of Exponents Student extend formulation of laws of exponent to include zero and negative exponents. 	<p>Check-Up 1 Quiz A Check-Up 2 Quiz B Unit Test Unit Project – Yearbook Sales</p>	<p>Teacher observations of students during work on performance tasks. Accountable talk during work on performance tasks.</p>
