*Technology Integration Promotes Success

A Weekly Newsletter

September 12, 2008

DCPS is going through the process of District Accreditation this school year. With the visit from the Quality Assurance Review Team rapidly approaching, it is imperative that school web sites are complete and current. I am happy to offer school-based assistance to ensure that school web sites meet all the requirements. In addition, web training for school web administrators is being offered at the Schultz Center each Tuesday in the month of September. Register for these sessions through the Schultz ERO. ~Kathy

School Spotlight

The purpose of a school website is to provide an effective means of communication for sharing a school's vision as well as various aspects of a school's day-to-day operations with parents, community, students, and educators. The challenge is to create a site that contains all pertinent information, has a professional look and is easy to navigate. Mike Monlezun, the webmaster at Sandalwood, has done an excellent job of creating a website that not only meets but exceeds these challenges. Take a minute to visit the exemplary Sandalwood website!!

Web 2.0

School 2.0

The School 2.0 eToolkit provides schools, districts, and communities a common education vision for the future that is supported by technology. The eToolkit Learning Ecosystem Map explores the many paths that can be taken to develop the schools of tomorrow. Visit <http://etoolkit.org/etoolkit/> to download the Learning Ecosystem Map and to explore all the resources available!!

School 2.0

Site of the Week

TeachingBooks.net is a literature site that provides a wealth of resources. This is just one of the many resources provided to teachers by DCPS Media Services. Go to the Professional Growth Tools page in the [Riverdeep Learning Village](#) to check out all of the database resources available!!
